

# Standard Moldings

## Traditional Crown

Add crown molding to your design for that perfect finishing touch. Made of either rigid thermofoil or hardwood and available in all standard colors, traditional crown sits atop your installation as shown above, or it can be fit to the ceiling for “built-in” appeal.

## Contemporary Crown

Contemporary crown is a square edge, single or double stacked slab-style topper made with melamine or wood veneer. Extended to the ceiling or sitting atop your closet, storage center or wallbed, this detail works equally well in both modern and mission style interiors.

## Bullnose Crown

Simple yet soft, bullnose crown takes the edge off a boxy shape with its rounded profile. Available both in rigid thermofoil and hardwood, bullnose crown provides an elegant furniture-style finish.

## Base Molding

Base molding adds a little more substance and style to free standing installations and closet sections that extend to the floor. Base molding is not only handsome but also great for covering the imperfections of a floor that’s not quite level.
